

Further radio gear update

1 message

Hi again Josh

Just another few quicky updates on the Tonga requirement

Firstly, please see attached photos

*The MIL-51/Barrett boxes shot was taken here in 

*The 4x SWC-100 Antenna shot was taken in  before express shipping today

*I also had  include tent pegs and tie down cord which will be needed to tether the ends of the SWC-100 antennas down

Further updates:

*As previously mentioned, Today I ordered the  from 

*I have also ordered 3x  which will come by road in a few weeks – There is no commitment for you to buy these, but I thought these might be good as backup for your project anyway

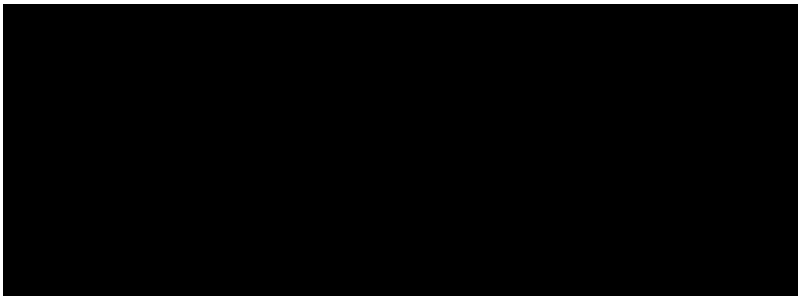

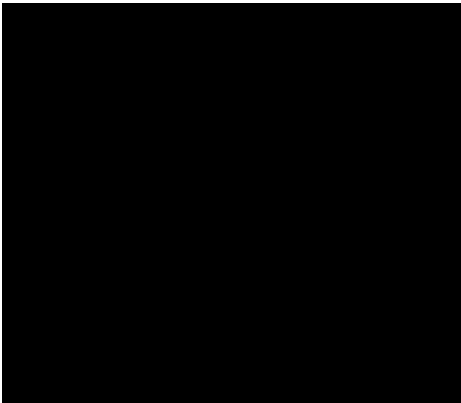

*As for an extra  next week, I wasn't game to ask because I had the  running around for me all day doing me favours - I didn't want to overstep my welcome 😊

All in all, things seem to be coming together quite smoothly (Famous last words 😊) – Tomorrow I will likely make up the extra 20M coaxial cables and start looking into carry cases etc

One final note is [REDACTED] hav [REDACTED] MIL-51 on the shelf. Its likely that two are sold, so that leaves [REDACTED] remaining.

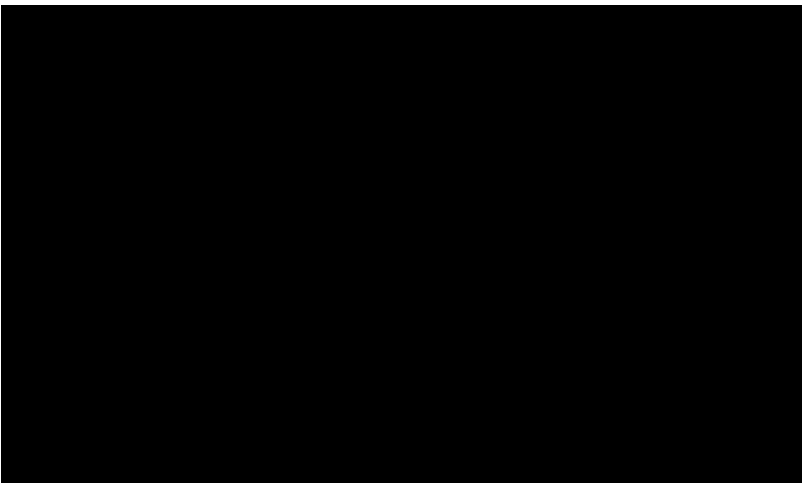

Chat again tomorrow with updates

Thanks

Attached

With regards,

MIL-51
X 2
